MOCK ANALYSIS TEMPLATE

Mock-test system · Analysis sheet · Mock log ·
Mistake Book pages

Contents

Page numbers marked **MB** refer to the Master Book, where the full chapter is.

I	MOCK ANALYSIS KIT	3	Mock Analysis Sheet	6
			Mock Test Log	8
			The Mistake Book	10
	The Mock-Test System	4		

PART I

Mock Analysis Kit

Printable mock-score, analysis and error-log sheets. Print one set per mock.

• The Mock-Test System	4
• Mock Analysis Sheet	6

• Mock Test Log	8
• The Mistake Book	10

PART I · MOCK ANALYSIS KIT

The Mock-Test System

A mock test has two jobs: to **rehearse the exam** and to **show you what to fix next**. Most students do the first and skip the second, which wastes most of the mock's value **RECOMMENDATION**.

How many mocks, and when **RECOMMENDATION**

Phase	When	Mocks	Type
A · Building	while the syllabus is still in progress	1 every 2 weeks	part-syllabus tests on completed chapters
B · Full syllabus	from the end of the syllabus to 45 days before the exam	1 per week	full-length (original mocks, older PYQ shifts)
C · Intensive	last 45 to 10 days	2–3 per week	full-length, including recent PYQ shifts
D · Final	last 10 days	1 every 2–3 days, the last one 2–3 days before the exam	recent unseen shifts, at your exam time
Exam eve	—	none	formula sheets and rest only

☆ **IMPORTANT** The 1 : 1 rule

Spend at least as long analysing a mock as taking it (3 hours), within 24 hours. If a week has no time for analysis, take fewer mocks, not less analysis.

Mock conditions (non-negotiable)

Replicate the exam

- ☐ Same start time as your shift (9:00 or 15:00)
- ☐ 3 hours, no breaks, no phone in the room
- ☐ Only blank rough sheets and a pen
- ☐ On-screen CBT format whenever possible, with the NTA-style palette (answered / not answered / marked)
- ☐ Water allowed; no food during the paper

Replicate the plan

- ☐ Follow your subject order and round plan (page **MB 480**)
- ☐ Note the time at each checkpoint (e.g. 0:55, 1:55, 2:40)
- ☐ Write a code next to each skipped question: **S** (skip for now), **N** (never)
- ☐ Stop exactly at 3:00, then fill Part 1 of the analysis sheet **before** checking answers

The six-step analysis

- 1 · Before checking answers**
 Record time per subject, the number attempted, and your confidence in each answer (sure / 50-50 / guess). This baseline shows whether your confidence is well calibrated.
- 2 · Score & breakdown**
 Marks per subject; correct, wrong and unattempted counts; accuracy = correct ÷ attempted.
- 3 · Question-by-question**
 Give every question a status: **C** correct · **W** wrong · **UK** unattempted but you *knew* how · **UN** unattempted and not known. UK questions are free marks lost.
- 4 · Classify every W and UK**
 Assign one of the 8 mistake types (page **10**) and write one line on what happened.

5 • Time audit

Which questions took more than 3 minutes? Did easy questions get skipped because time ran out?

6 • Three action items

No more than three, each specific ("re-derive rolling on an incline and solve 10 questions", not "revise rotation"). Put them into next week's plan.

🕒 STRATEGY The re-attempt

Seven days after a mock, re-attempt every W and UK question without looking at the solution. If you still get it wrong, it goes into the Mistake Book as a **repeat**, the highest-priority category.

Reading your mock trend**🕒 STRATEGY What the numbers mean** **🕒 RECOMMENDATION**

- **Accuracy below 80%** means slow down. You are over-attempting. Cut the attempts from the questions you are least sure of.
- **Accuracy above 92% with few attempts** means you are too cautious, or too slow. Work on speed in Round 1.
- **Many UK questions** is a time-management problem, not a knowledge problem. Fix selection and the 3-minute rule.
- **One subject much lower** decides the next two weeks of your plan. See the scenario tables (page **MB 16**).
- **A single bad mock means nothing**. Judge the average of the last three.

PART I · MOCK ANALYSIS KIT

Mock Analysis Sheet

Print one copy per mock (this chapter is two pages), or fill it in on screen. The codes are defined on the previous pages; the mistake types are on page [10](#).

MOCK TEST Part 1 · Before checking answers

Mock name / source _____ Date _____ Start time _____

Sleep the night before (hours) _____ Energy at start (1–5) _____

Subject	Order	Time used	Attempted	Sure	50-50
Physics	_____	_____	_____	_____	_____
Chemistry	_____	_____	_____	_____	_____
Maths	_____	_____	_____	_____	_____

MOCK TEST Part 2 · Score

Subject	Correct	Wrong	Unattempted	Marks (/100)	Accuracy %
Physics	_____	_____	_____	_____	_____
Chemistry	_____	_____	_____	_____	_____
Maths	_____	_____	_____	_____	_____
Total	_____	_____	_____	_____	_____

Marks lost to negatives _____ · Free marks lost (UK × 4) _____ · Estimated percentile (page [MB 16](#))

MOCK TEST Part 3 · Question status (C / W / UK / UN, plus the mistake code for W and UK)

Q	Physics	Chemistry	Maths	Q	Physics	Chemistry	Maths
1	_____	_____	_____	14	_____	_____	_____
2	_____	_____	_____	15	_____	_____	_____
3	_____	_____	_____	16	_____	_____	_____
4	_____	_____	_____	17	_____	_____	_____
5	_____	_____	_____	18	_____	_____	_____
6	_____	_____	_____	19	_____	_____	_____
7	_____	_____	_____	20	_____	_____	_____
8	_____	_____	_____	21 NV	_____	_____	_____
9	_____	_____	_____	22 NV	_____	_____	_____
10	_____	_____	_____	23 NV	_____	_____	_____
11	_____	_____	_____	24 NV	_____	_____	_____
12	_____	_____	_____	25 NV	_____	_____	_____
13	_____	_____	_____				

MOCK TEST Part 4 · Mistake summary (count W + UK by type)

Type	Code	Physics	Chemistry	Maths	Total
Concept gap	CG				
Formula / fact recall	FR				
Calculation	CA				
Misreading	MR				
Transcription & clicking	TR				
Time & selection	TS				
Guessing (over-attempt)	GU				
Pressure (panic, fatigue)	PR				

MOCK TEST Part 5 · Time audit

Checkpoints reached (planned → actual): 1st subject done · 2nd subject done

· Round 2 started

Questions that took more than 3 minutes (Q numbers)

Easy questions left unattempted because of time (Q numbers)

MOCK TEST Part 6 · Three action items for next week

1.
2.
3.

Re-attempt of W and UK questions (7 days later): date ☐ done · still wrong:

→ Mistake Book ☐

MOCK TEST Part 7 · Reflection (one line each)

What went well

What I will do differently in the next mock

PART I · MOCK ANALYSIS KIT

Mock Test Log

One line per full-length mock. The trend matters more than any single score: judge progress by the average of your last three mocks (page 4).

MOCK TEST Mock log

#	Date	Source / paper	P	C	M	Total	Neg.	Acc. %	Top fix (from the analysis)

Score trend

Plot each mock's total and join the points. Draw your **target band** (page [MB 16](#)) as two horizontal lines in a different colour. Three points in a row inside the band show that the level is stable.

Blank score-trend chart: mock number (1–30) against total score out of 300.

PART I · MOCK ANALYSIS KIT

The Mistake Book

Most marks between 95 and 99+ percentile are not lost to topics you don't know. They are lost to **repeated, preventable mistakes** in topics you do know. The Mistake Book is a system for making each mistake once only.

☆ IMPORTANT The one rule

Every wrong or "knew-it-but-skipped" question from practice, PYQs and mocks gets **one entry**, classified into **one of eight types**. Each type has its own prevention routine. Re-attempt the entry after 7 days. If you get it wrong again, it becomes a **repeat**: the highest priority in your weekly review.

The eight mistake types

1 · CG · Concept gap

You didn't understand the idea, or you applied the wrong principle.

Example: using energy conservation in an inelastic collision.

Prevention: re-learn the concept from the module and NCERT. Explain it aloud in 60 seconds without notes. Then solve 5 **fresh** questions on the same model. Reading the solution is not enough.

2 · FR · Formula or fact recall

You knew the topic but misremembered a formula, condition, exception or NCERT fact.

Example: $\frac{4T}{r}$ used for a drop instead of a bubble.

Prevention: add it to your personal "forgotten" card. Test it with the three-pass method (page **MB 367**) on days 1, 3 and 7. Write the **condition** next to the formula.

3 · CA · Calculation

The method was right; the arithmetic or algebra went wrong.

Example: $\frac{3}{5} \times \frac{10}{9} = \frac{3}{2}$ (wrong; it is $\frac{2}{3}$).

Prevention: write every step in a boxed area of the rough sheet. Cancel before multiplying. Verify NV answers by substitution or a quick estimate. Do the 15-minute daily drill (page **MB 394**).

4 · MR · Misreading

You solved a different question from the one asked: missed "not", "incorrect" or "except"; wrong unit; radius instead of diameter; d instead of d^2 .

Prevention: underline the **asked quantity** and any negative word before solving. Write "Find: ___" at the top of your rough-sheet box. Re-read the last line of the question before you mark the answer.

5 · TR · Transcription & clicking

The right answer in your rough work, but a wrong value copied, a wrong option clicked, or a digit dropped while typing.

Prevention: number your rough-sheet boxes by question. Before saving, compare the screen with the rough sheet: "option letter, value, sign". In the NTA interface, check the palette colour after saving.

6 · TS · Time & selection

You spent too long on one question, or ran out of time with easy questions unread.

Prevention: the 3-minute rule; the round system and checkpoint times (page **MB 480**); a quick first scan of each section. Track the number of UK questions per mock. It should fall week by week.

7 · GU · Guessing (over-attempt)

You answered with fewer than two options eliminated, or entered an NV answer you hadn't finished.

Prevention: apply the two-elimination rule (page **MB 396**). In every mock, mark each guess with "?" on the rough sheet and count how many were right. Most students find their guesses score below break-even.

8 · PR · Pressure

Mistakes you would never make in calm practice: blanking, panic, careless errors late in the paper.

Prevention: rehearse under exam conditions at exam time; sleep 8 hours; use the reset routine (page **MB 455**). Just before the test, write briefly about your worries (shown to improve exam performance in anxious students [LS-RAM]). Treat the adrenaline as fuel, not as a threat [LS-JAM].

How to keep the book

1 · Log within 24 hours

Use the entry format below, in a notebook or on the printable pages. One line of diagnosis is enough. Accuracy matters more than neatness.

2 · Tag the type

One of the eight codes. If two apply, choose the **first** thing that went wrong.

3 · Write the fix

A specific action ("revise lens sign convention; solve 5 lens questions"), not a feeling ("be careful").

4 · Re-attempt on day 7

Cover the solution and re-solve. Right: tick it. Wrong: mark **R** (repeat) and schedule it again for day 14.

5 · Weekly review (30 min)

Count entries by type. The most frequent type decides next week's focus (e.g. many CA entries: daily drill plus verification habit).

 TIP What a good entry looks like

P-13 · Mock 4 Q17 · MR · Asked for the field at $2R$ *inside* a hollow sphere (answer 0). I used the outside formula. **Fix:** draw the region before choosing a formula. Re-attempt on 14 Mar ☐ ✓ / R
